A **unique** system which **restores** the vital nasal function to neck breathers

Trachi-Naze®+Plus

Effective Respiratory Rehabilitation

Key Features

- Excellent filtration protection from airborne particles
- Helps restore normal airway resistance
- May help mucus production
- Improved heat and moisture within the trachea

Trachi-Naze®+Plus restores your lost breathing resistance

A revolutionary breakthrough for neck breathers. Trachi-Naze +Plus restores the essential functions of the nose, making breathing easier and more efficient. Restorative nasal system for neck breathers

Trachi-Naze +Plus restores the lost nasal function of neck breathers, adding back heat and moisture, as well as filtering airborne particles

Multi-function filter cassettes

- the heart of the ***Trachi-Naze® +Plus*** System

The Trachi-Naze +Plus multi-function filter cassettes are the heart of the Trachi-Naze +Plus System. They contain three filter layers which create a "closed" system, ensuring that all air is warmed, humidified and filtered, and restoring a functional airway resistance.

Night Filter (Blue)

Provides normal airway resistance adding back almost all lost resistance. These filters would be normally worn at night and can be easily tolerated during sleep.

LATNP1001	**Blue (Night)**	**Pack of 30**

Day Filter (Green)

Provides around half airway resistance allowing free passage of air for daytime use. The green (day) filter is comfortable during the day for normal activity.

LATNP1002	**Green (Day)**	**Pack of 30**

Active Filter (Orange)

Minimal airway resistance allowing strenuous activities. The active (orange) filter enables wearers to carry out strenuous activity without losing the protection offered by the filters. It has minimal airway resistance.

LATNP1003	**Orange (Active)**	**Pack of 30**

Trachi-Naze® +Plus

Stoma Studs

The Trachi-Naze +Plus stoma studs provide a gentle sealing within the stoma and in combination with the Trachi-Naze +Plus filter cassettes give the wearer greater confidence as well as significantly enhanced respiration.

Trachi-Naze® +Plus Stoma Studs

Scientifically **proven** protection, filtration and humidification

Buchanan®

Laryngectomy and Tracheostomy Protector

Key Features

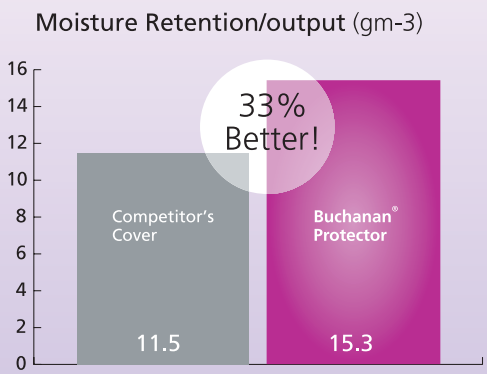
- Scientifically proven benefits
- Soft and comfortable
- Effective filtration and humidification
- Available in two sizes

The Buchanan® Protector is a neck worn cover that provides filtration and delivers efficient heat and moisture exchange.

Buchanan delivers unique benefits to neck breathers through effective product design and material composition - the crucial benefits delivered by the exclusive Hydrolox® 1 Foam specially designed for effective heat and moisture delivery (see chart below).

Carefully selected materials such as pure cotton mesh and the special Hydrolox 1 Foam provides the following benefits:

- Comfortable and soft to the skin with no sharp edges
- Non-adhesive therefore no skin irritation
- Flexibility, so rests comfortably on the neck and chest
- Can be used during radiotherapy
- Can be used immediately, post-operative
- Ideal in all weather conditions
- Choice of sizes - small and large
- Can be worn day and night



Buchanan is the only airway protector with Hydrolox® 1 Foam offering the following benefits:

- Excellent moisture absorbing capacity
- Provides heat and moisture to incoming air
- Filters out dust and dirt

Buchanan Large

Dimensions:
Width: 220 mm Length: 260 mm

LABUP0001	**Large**	**Pack of 10**

Buchanan Small

Dimensions:
Width: 145 mm Length: 155 mm

LABUP0002	**Small**	**Pack of 10**

For best results when wearing the Buchanan protector please ensure that the protector fits snug, resting on the neck line.

The Buchanan range is proven to filter up to 49% more airborne particles than the competition(1)

The filtration ability of Buchanan® and Buchanan® Lite stoma protectors was tested against two competitor stoma covers in a laboratory (1). The graph below shows the percentage of particles which each product was able to filter. Airborne particles equivalent to the size of mould spores, dust and some bacteria were tested (4.5 microns). These are small enough to be inhaled and reach the middle of the lungs.

Percentage of airborne particles filtered by each product.

***HYDROLOX®* 1** FOAM

Buchanan®

Better breathing, better stoma care

Scientifically **proven** protection, filtration and humidification

Buchanan® Lite

Laryngectomy and Tracheostomy Protector

Key Features

- Lightweight and comfortable
- High performance
- Essential protection
- Scientifically proven benefits
- Choice of colours

The Buchanan® Lite Protector offers additional features over the original Buchanan design and offers a wider choice of colours.

- Essential fine filtration through the dual layer microfibre filter layer
- Excellent moisture retention, scientifically tested to provide 44% improved moisture retention compared to other protectors
- The breathable polyester non-woven design makes the product lightweight and soft
- Ezi-Tie® adjustors ensure simple and effective fastening

Buchanan® Lite

Essential airway protection **and** comfort

Scientifically proven protection, filtration and humidification

Buchanan® DeltaNex

Airway Protector System

Key Features

- Lightweight
- Easy adjustable touch-to-close fastening
- High performance
- Essential protection
- Scientifically proven benefits
- Can be combined with DeltaNex cravats

With all the benefits of the Buchanan® Protector but featuring an alternative touch-to-close fastening system. Team with DeltaNex cravats to provide a fashionable cover.

- Much easier for some laryngectomees to use
- Choice of many cravat colours and patterns
- The Buchanan DeltaNex Protector is available in packs of 10 with 2 neckbands

Featuring easily adjustable touch-to-close fasteners for maximum comfort

Team with DeltaNex Cravats to provide a fashionable cover

Buchanan® protectors perform better than other single layer stoma protectors

In trials the Buchanan Protector was found to provide 33% more moisture output than ordinary covers.

Laryngofoam

Disposable Foam Filters

Key Features

- Soft, rounded edges
- The only filters with Hydrolox® 1 Foam
- Available on FP10 Prescription

Laryngofoam filters warm, moisten and filter the incoming air and can be applied in seconds.

- Laryngofoam filters are held securely in place by a hypoallergenic adhesive strip
- The simplicity and effectiveness of this product ensures its popularity throughout the world with laryngectomees in all climates and conditions
- Laryngofoam has excellent moisture transfer properties which means better humidification within the trachea for breathing comfort and confidence
- Soft rounded edges are a unique feature of the Laryngofoam range

- Available in both white and beige colours, Laryngofoam foam filters are supplied in packs of 30. Use 1-2 per day as necessary
- 30% better moisture capacity than any other leading filter foam
- The only filters with Hydrolox® 1 Foam

Kapitex
Laryngectomy Tube

Medical Grade Silicone Laryngectomy Tubes

Key Features

- Supports the stoma
- Smooth and soft material
- Extensive range of lengths

Comprehensive range of diameters and lengths give you the best choice.

- Produced from medical grade silicone
- Soft yet supportive for the stoma and the trachea
- Smooth rounded edges – for extra comfort and safety
- Competitively priced
- Supplied individually wrapped
- Single patient use product

Comfortable, flexible stoma **support**

Kapitex
Stoma Studs

Medical Grade Silicone Stoma Studs

Key Features

- Simple and effective
- Supplied in four sizes
- Comfortable to wear
- Single patient use

Available in four sizes, Kapitex Stoma Studs are simple devices to help keep the stoma open. They provide the right balance between comfort and flexibility and give the necessary support to the stoma opening.

- Stoma Studs are produced from radio-opaque medical grade silicone. Carefully designed, offering no sharp or rigid edges and comfortable to wear. The rounded, moulded edges ensure that the stud is easily placed into the stoma without discomfort
- A hole has been made in the outer flange to allow a thread to be attached and pinned to clothing to prevent ingestion and loss if expelled through coughing

The rounded, moulded edges ensure easy placement into the stoma without discomfort.

Ideal for **difficult stoma anatomy** - providing cushioning behind the laryngectomy tube

Kapi-Gel®

Tracheostoma Spacer

Key Features

- Acts as a cushion
- May help reduce air leakage
- Promotes skin care, reducing soreness
- Available in two thicknesses and two sizes

- Acts as a cushion behind the laryngectomy tube flange/neckplate
- Due to its transparency, Kapi-Gel is not noticeable around the stoma
- Promotes skin care around the stoma and helps reduce soreness around the stoma and tube site
- May help to reduce air leakage around the laryngectomy tube
- Kapi-Gel is a tacky laminated silicone gel available in two thicknesses 3 mm and 5 mm and in two hole dimensions 8mm and 12 mm. Spacer diameter 43 mm
- Available in packs of 10

A problem solver to 'fill in' the difficult contours around the stoma area allowing the comfortable use of laryngectomy tubes, stoma studs and heat / moisture exchange filter holders.

Laryngectomy **Management Aids**

Buchanan® Shower Shield

The PVC material helps prevent water entering the stoma as it is waterproof. For breathing comfort we advise that a protector or filter be worn underneath the Shower Shield. Please ensure that the Shower Shield fits snugly against the neckline to form a seal. Note: For deep stomas extra care is needed if using this product. Colours may vary from time to time.

Ordering information:

LASHC0001	**Buchanan® Shower Shield Waterproof Cover - Blue**

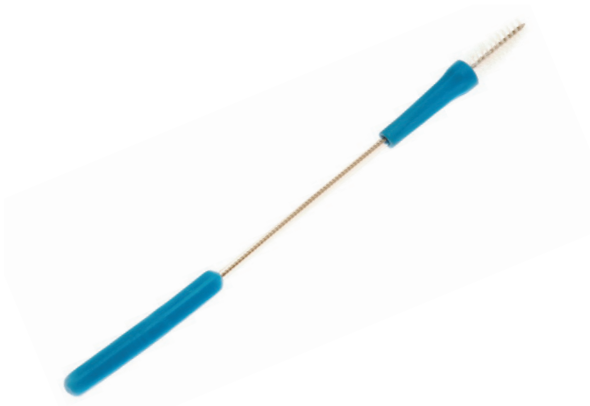
Trachi Mist

A very fine aerosol spray mist (high nebulation) to provide extra moisture when necessary – in very warm and dry conditions. Ideal for ward, home and travel use (contents not supplied).

Ordering information:

TRACC0015	**Trachi-Mist Spray Atomiser – 25ml**

Voiceline Voice Prosthesis Cleaning Brushes



Kapitex have improved the quality and safety of the Voice Prosthesis Cleaning Brush. Featuring an adjustable safety stop (registered design), which enables you to place the brush into your prosthesis, it reduces the risk of the brush passing through the prosthesis causing injury.

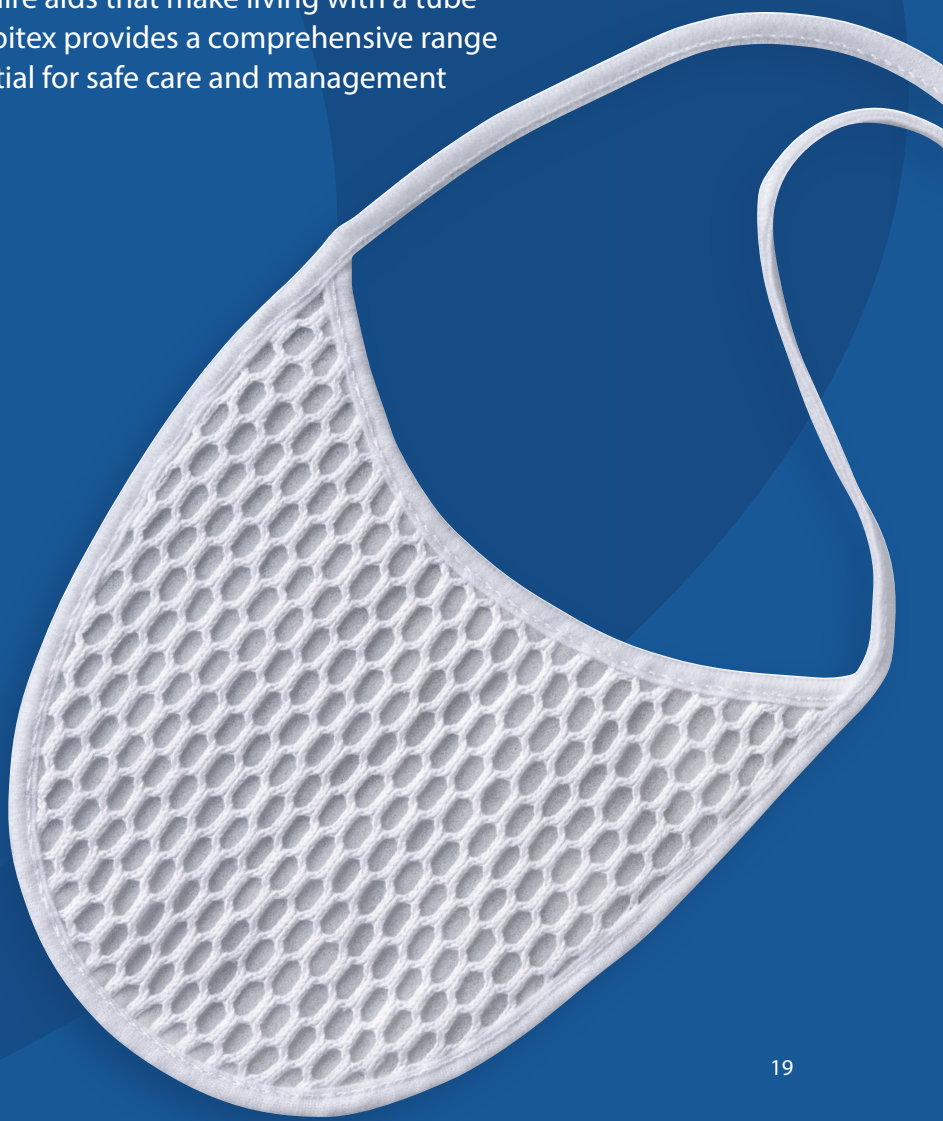
Tracheostomy
Care / Essentials

Tracheostomised patients require aids that make living with a tube as comfortable as possible. Kapitex provides a comprehensive range of high quality products essential for safe care and management of tracheostomy tubes.



With **skin contact** layer, **absorption** layer and **backing** layer

Trachi-Dress®

Tracheostomy / Cannula Dressing

Key Features

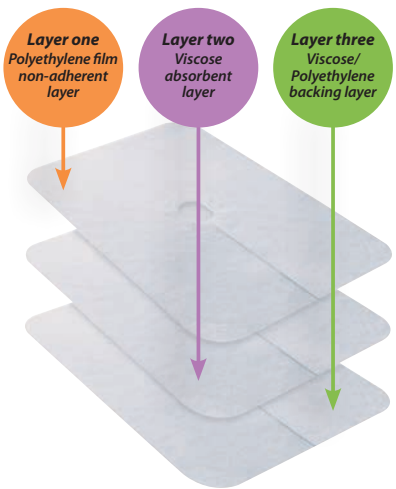
- Absorbs mucus and keeps the skin dry
- Low profile
- Soft rounded edges, smooth to the skin
- Available in two sizes, small and large

With skin contact layer, absorption layer and backing layer. Dedicated to keeping the tracheal stoma area dry and making tracheostomy management easier. Trachi-Dress absorbs secretions – reducing the risk of secretions sitting on the skin underneath a tracheostomy tube. As secretions are absorbed into the body of the dressing away from the skin, excoriation is minimised and the risk of an infected area developing is reduced.

Additional benefits:

- **Low profile** – does not raise tracheostomy tubes from the neck
- **Soft rounded edges** – smooth on the skin
- **Keyhole cut for easy fitting** around the tracheostomy tube shaft
- **Available in two sizes**, small and large – the small being suitable for children
- **Individually wrapped** in peel-pouch and sterile

Trachi-Dress - structure



Dedicated to keeping the tracheal stoma area dry and making tracheostomy management easier.

The construction of Trachi-Dress®

The dressing comprises three layers, each of which plays an important role.

LAYER ONE

This skin contact layer is non-adherent. The polyethylene film helps prevent tissue adhering to the dressing – thereby aiding removal when changing the dressing. This layer also helps keep the skin dry.

LAYER TWO

This is the absorbent layer. The middle section is constructed of viscose to ensure maximum absorbency, through capillary action which draws secretions away from the skin.

LAYER THREE

This viscose / polyethylene combination provides an effective seal which retains absorbed secretions within the body of the dressing.

Dimensions:
Small: 82 mm W x 60 mm L x 2 mm thick.
Large: 100 mm W x 82 mm L x 2 mm thick.

TRDRE0001	Small	Pack of 20
TRDRE0002	Large	Pack of 20

The **high performance** polyurethane **foam** dressing

Trachi-Dress® F

Sterile Foam Tracheostomy / Cannula Dressing

Key Features

- Quicker absorption speed
- Better retention
- High density
- Balanced moisture vapour transmission rate

- A non-stick polyurethane film contact layer, which is non-adherent and permeable to fluid. This helps to keep underlying skin dry and provides minimum adhesion to the stoma site, which increases patient comfort and minimises pain at dressing change
- High performing absorbent centre layer composed of polyurethane foam. This draws secretions away from the skin through a capillary action
- A semi-permeable polyurethane net-film backing layer. This provides an effective seal which retains absorbed secretions from the tracheostoma within the dressing, whilst permitting the passage of air and water vapour to/from the underlying skin
- The dressing is designed to be used in conjunction with a tracheostomy tube (the dressing sits between the neck plate / flanges of the tracheostomy tube and the skin surrounding the tracheostoma) and features a central keyhole aperture to enable it to be fitted around the tracheostomy tube shaft

Kapitex is pleased to extend the Trachi-Dress range by introducing our advanced polyurethane foam dressing technology. These new dressings incorporate a perforated soft PU skin contact layer. This soft PU layer adds a new dimension to tracheostomy care.

Benefits:

Trachi-Dress F sterile tracheostomy dressing is designed to help protect the skin surrounding a tracheostoma against abrasion (which can lead to irritation and/or infection of the skin) by:

- absorbing secretions from the tracheostoma; and,
- acting as a mechanical barrier between the skin surrounding the tracheostoma and the neckplate and flanges of the tracheostomy tube.

Trachi-Dress F sterile tracheostomy dressing is intended for single use only. The dressing should be replaced at least daily, or more frequently if the dressing becomes saturated with secretions.

Dimensions:

Small: 82 mm W x 60 mm L x 5 mm thick. Keyhole diameter - 7 mm

Large: 100 mm W x 82 mm L x 5 mm thick. Keyhole diameter - 9 mm

TRDRF0002	**Large**	**Pack of 10**

For **extra** security, comfort, convenience and value

Trachi-Hold®

Tracheostomy Tube Holders

Key Features

- Secure positioning of tube on neck
- Easily and quickly adjusted
- Soft and flexible materials
- Avoids soreness and discomfort

The Trachi-Hold tracheostomy tube holder is designed for use with all metal and plastic tracheostomy tubes, with the exception that it is not suitable for use with tracheostomy tubes having a silicone neckplate.

The Trachi-Hold tracheostomy tube holder uses a two-piece neck band design, enabling the neck band length to be adjusted to suit individual patients. The neck band features integral 'touch-to-close' hook -and-loop fastening tabs for:

a) connecting together the two pieces of the neck band to achieve the desired fit; and,

b) attaching the neck band ends to the neck plate (or fixation flange) of a tracheostomy tube.

Successfully used in ICU, ENT wards, clinics and community settings.

Trachi-Hold is available in three different sizes:

Trachi-Hold Large

Designed to provide secure positioning of the tracheostomy tube.

Dimensions:
Width 26 mm. Length (adjustable) up to 470 mm

TRACC0012	**Large**	**Pack of 10**

Trachi-Hold Small

Kapitex also offer a smaller version as an ideal size for children

Dimensions:
Width 17 mm. Length (adjustable) up to 350 mm

TRACC0014	**Small**	**Pack of 10**

Trachi-Hold Mini

Designed for babies and small children

Dimensions:
Width 17 mm. Maximum Length 190 mm

TRACC0030	**Mini**	**Pack of 10**

Ideal for **cleaning** all **plastic** and **silicone** tracheostomy tubes

Trachi-Swab®

Hi-Vis Tracheostomy Tube Cleaning Swabs

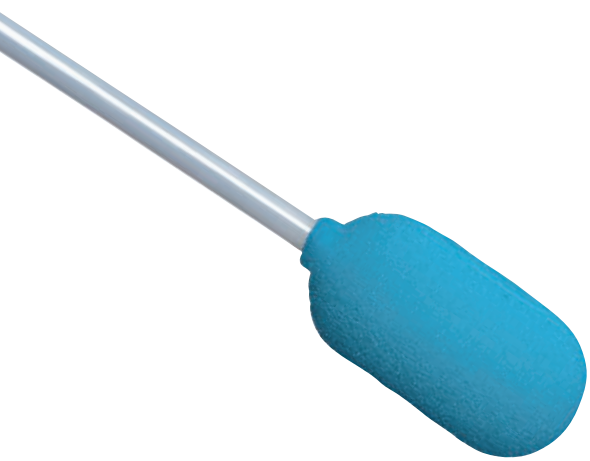
NEW! Hi-Vis with longer handle

Key Features

- Soft, foam tips to prevent scoring
- Flexible plastic shaft
- Available in three sizes

- The soft, foam tips prevent scoring of the inside surface of tube and cannula
- When used with cleaning solutions the swabs will help to remove build up of secretions and keep the tube surfaces clean
- Trachi-Swabs are supplied in packs of 50
- The foam heads of the swabs are better suited for cleaning tracheostomy tubes than cotton tipped swabs as there are no loose fibres which could be left behind in a tube during cleaning
- Trachi-Swabs feature a flexible plastic shaft to allow ease of movement inside the cannula

Soft, foam tips prevent scoring of the inside of tubes and cannula.



Trachi-Swab is available in three different sizes:

Trachi-Swab Small

Recommended for tube sizes 3.5 mm - 5 mm

Dimensions:
Total length of handle and swab head 17cm

TRSWB0150	**Small**	**Pack of 50**

Trachi-Swab Large

Recommended for tube sizes 5 mm - 7.5 mm

Dimensions:
Total length of handle and swab head 17cm

TRSWB0250	**Large**	**Pack of 50**

Trachi-Swab Extra Large

Recommended for tube sizes 8 mm and upwards

Dimensions:
Total length of handle and swab head 17 cm

TRSWB3050	**Extra large**	**Pack of 50**

Alcohol **free, no sting** skin **protection**

Trachi-Wipe®

Tracheostomy Skin Wipes

Key Features

- Alcohol free, no sting skin protection
- Helps to reduce skin irritation
- Non sticky to touch when dry

Trachi-Wipe skin wipes have been specially formulated for neck breathers to help protect the skin around the stoma and tube site from secretions.

- Less aggressive than conventional alcohol soaked wipes which cause coughing or discomfort due to the inhalation of alcohol fumes
- Helps to reduce skin irritation as using the wipe provides a protective layer upon the skin
- Simple to use. Open sachet, wipe around the stoma area, wait a few moments to ensure dry, then apply dressing if required
- Non-sticky to touch when dry

Ordering information:
Width 150 mm Length 100 mm

LANNZ3001	**Trachi-Wipe Skin Wipes**	**Pack of 30**

Trachi-Brush® Tracheostomy Cleaning Brushes

Trachi-Brush are used to ensure that the outer and inner tubes are kept free of dry secretions and debris. Available in four sizes, 8, 10, 12, and 14 mm diameter, in packs of two. Brush head length – 90 mm.

The brushes are produced with nylon bristles, spirally bound in stainless steel and moulded into a plastic handle. The brush head is rounded to help reduce the risk of scratching tube surfaces.

Ordering information:

(contents not supplied)

Voiceline

Tracheostomy speaking valve

The Voiceline Tracheostomy Speaking Valve is a one-way valve which is fitted to a 15 mm connector on a tracheostomy tube.

The valve works in the following way – on inspiration, air opens the valve and enters the trachea – on expiration the valve is closed and air is diverted into the upper airway via the vocal cords (assuming they are mobile) allowing voicing to take place.

The Voiceline Speaking Valve is an economical low cost device – it is designed for short term use. When fitted, used and cleaned in accordance with the instructions (provided), the valve will give 10-14 days satisfactory service before replacement is necessary. Single patient use.

Caution: Not for use by laryngectomised patients.

TRVSV0001	Pack of 2

Please Note – For longer term Speaking Valve use and for patients on ventilators who require speaking valves, we recommend the Passy-Muir range of Speaking Valves.

Drink-Rite® - Providing **safe, controlled** flow of fluids

Drink-Rite®

The Safer Hydration Delivery System

Key Features

- Available in cup or beaker options each provided with 5cc and 10cc inserts. (Approx. cup holding volume 225cc)
- Suitable for users who cannot tolerate thickened fluids
- Suitable for stage 1 thickened fluids (tested with 'Fresubin thickened Stage 1')
- A safe option for users with dementia or learning difficulties to prevent 'gulping' (drinking too quickly)
- Bite-safe and shatterproof
- Dishwasher safe
- Ideal for domestic as well as nursing home use
- CE marked

- Two flow control inserts with each cup. Collects only 5cc or 10cc of fluid with each tip of the device, to deliver a small amount into the mouth.
- Smooth contoured spout to encourage good lip seal.
- Indented lid design to accommodate the nose. Prevents need to tilt the head, for a safer swallowing position.
- Clear vestibule for visibility of contents.

The Drink-Rite® Cup and Beaker are supplied with 5cc and 10cc inserts

The Drink-Rite® System provides a controlled limited flow of fluid of 5cc or 10cc into the mouth without the user having to tilt their head.

This is important particularly after stroke or in the care of the elderly. Children with development issues will also benefit from the design features of Drink-Rite.

Drink-Rite®

Ordering information:

OSFSA5301	**Comprising of:** **Cup, 5cc & 10cc insert**
OSFSA5302	**Comprising of:** **Beaker (no handles), 5cc &10cc insert**

Drink-Rite® Beaker

The Drink-Rite® Cup features wide handles to allow easy hold and grip

Weighted to help **reduce spills** for patients with tremor.

Dysphagia Cup

Weighted Drinking Cup

Key Features

- Suitable for warm and cold fluids and thickened fluids
- Weighted to help reduce spills for patients with tremor
- One piece construction with wide handle to allow extended palm – so gripping not required. The cup is supplied with a detachable base for extra stability
- Hand washing recommended
- Made of durable non toxic polycarbonate material, cup base polyethylene
- CE marked

Kapitex Dysphagia Cup is oval shaped to accommodate nose clearance – which prevents the need to tilt the head whilst drinking.

Kapi-Cup®

Drinking Cups

Key Features

- Made of polypropylene with smooth moulded edges, bite-safe and shatterproof
- Suitable for warm and cold fluids and thickened fluids
- Small size (30ml) ideal for use with children
- The medium and large sized cups are supplied with a double handle holder
- A choice of single or double handle holders are available in packs of 2
- Dishwasher safe
- CE marked

Kapi-Cup® shown with blue 80 ml cup

Kapi-Cups have a cut out on the non-drinking side so that they can be tilted without interference by the nose.

This allows the drinker to avoid tilting the head back, thus minimising the chance of liquid entering the respiratory tubes and causing choking.
